The PDF on Demand Service mashes multiple data sources into one fully formatted document in PDF format for downloading on demand. GTT customers can assign preformatted PDF templates with an HTML interface that their customers can include or exclude specific destination based information.

Using an HTML interface, the user can specify data sets they are interested in and based on the Origination and Destination a customized PDF can be generated in less than 2 seconds for download and printing. Multiple templates can be created to match specific marketing campaigns. For example Origin and Destination Timetable format, Airport Format, with or without advertising.
