

# Route Map

The GTT Route Map is modular – enabling you to customize a graphical interactive display of your unique route network.

## Features include:

- ▶ Product Features for Route Map and Graphical Booking Interface
- ▶ All of your stations (and only your stations) display on a customizable high quality map
- ▶ Destinations are indicated by an arced route line or by a blinking or color differentiated marker.
- ▶ Destination names automatically display at different zoom levels with automated non collision station name display.
- ▶ Optionally, stations can be selected to form an origin/destination city pair for linking to and pre populating a booking page.
- ▶ Dynamically updated
- ▶ GTT hosted with Iframe and/or Web link display

The Route Map is a very flexible, module based solution with many included options. This allows for the construction of a fully customized Route Map to optimize the brand and breadth of your unique network.

Route Map with validated metal and codeshare nonstop

and connections drawn.

Routes with partial codeshare flights differentiated by color.

The Route Map is a state of the art, dynamically updated, graphical representation of your route network for your customers.
